Press Release

FOR IMMEDIATE RELEASE May 15th 2018

Charles-LeMoyne Hospital Affirms

Meditel® & PatientLogix™ Media Studio Cloud Based Value Proposition Awards Hôpital® Patient TV/Media System Contract

The Charles-Le Moyne Hospital (415 beds) offers a range of general and specialized services and subspecialized services. It is recognized for its teaching activities and for its Research Center focused on innovative health interventions. It is a designated university affiliated center with the University of Sherbrooke.

A \$130 million expansion and redevelopment project for Charles-Lemoyne Hospital will be moving forward. Nearly \$4 million of the \$130 million investment will go towards the development of a new wing with an additional 25 beds. Another \$4 million will go towards a wing containing all outpatient clinics, including surgical and pre-op clinics. But the highlight of the announcement, according to Health Minister Gaetan Barrette, is the \$123 million invested in the construction of a building for operations, including 13-15 new operating rooms and facilities for day surgery and post-op service.

Hôpital's cloud based infotainment and educational media system will be going into service at the Charles-Le Moyne Hospital in Q2 of 2018 with a 10 year contract. Hôpital Inc. has been for over 40 years Canada's foremost healthcare supplier of in-hospital infotainment, education and communication systems and services 45 hospitals in Canada.

The Meditel Studio Patient Bedside TV Media Terminals provides hospitals a cost effective "network window" through which hospital personnel can easily access and manage Electronic Medical Records, Health Education, Video & Audio Communications, Interactive Hospitality applications and where patients can easily self-rent to access a wide variety of Infotainment, Communications, Health Education, and host of other Interactive Hospitality applications and services on a 24/7 basis.

The PatientLogix Media Studio Cloud based Delivery System provides a cost-effective means of delivering important Health Educational media to patients throughout the full patient care continuum. Its compliment of On-Demand and Prescriptive media applications and platforms are modular, interoperable and can deliver services through existing hospital TV system infrastructures, on patient Computers, Tablets and Smart Phones and are completely scalable.
