# Press Release

FOR IMMEDIATE RELEASE March 8<sup>th</sup> 2018

## CIUSSS MCQ<sup>1</sup> from CHAUR Three Rivers and Ste-Croix Hospital Affirms Meditel® & PatientLogix™ Media Studio Cloud Based Value Proposition Awards Hôpital® Patient TV/Media System Contract

The Integrated University Health and Social Services Center of Mauricie and Centre-du-Québec is responsible for integrating the care and services offered to the population of its territorial network. It oversees the organization of services and their complementarity within the framework of its various missions (CH, CLSC, CHSLD, child and youth protection center, rehabilitation centers, public health), and this, in according to the needs of its population and its territorial realities. In addition, create, through collective leadership, a well-integrated university health and social services center that delivers high quality services for the people of Mauricie and Centre-du-Québec.

Hôpital’s cloud based infotainment and educational media system will be going into service at the Three Rivers hospital (507 beds) and Ste-Croix hospital located in Drummondville (175 beds) at the end of Q2 of 2018.

Hôpital Inc. has been for over 40 years Canada’s foremost healthcare supplier of in-hospital infotainment, education and communication systems and services 50 hospitals in Canada. The Meditel Studio Patient Bedside TV Media Terminals provides hospitals a cost effective "network window" through which hospital personnel can easily access and manage Electronic Medical Records, Health Education, Video & Audio Communications, Interactive Hospitality applications and where patients can easily self-rent to access a wide variety of Infotainment, Communications, Health Education, and host of other Interactive Hospitality applications and services on a 24/7 basis.

The PatientLogix Media Studio Cloud based Delivery System provides a cost-effective means of delivering important Health Educational media to patients throughout the full patient care continuum. Its compliment of On-Demand and Prescriptive media applications and platforms are modular, interoperable and can deliver services through existing hospital TV system infrastructures, on patient Computers, Tablets and Smart Phones and are completely scalable.
